OVERVIEW

M. Azhar Hussain, Ph.D. (econ), is an associate professor of economics at Roskilde University, Denmark. His research focuses on statistical analysis of societal welfare measurement issues including poverty, MDGs, poverty incidence mapping, employment, inequality, deprivation, multi-dimensional welfare/poverty, polarization, and labour market issues. Apart from standard approaches to multidimensional poverty, he also applies robust methods to measure multi-dimensional welfare. Data analysis is primarily based on population census data (Statistics Denmark) and surveys (EU-Silc, ESS, HBS, MICS, DHS, UN). Well-documented software coding is an important part of any empirical assignment both for documentation and reproducibility reasons. Assignments are reported in writing, and often communicated at meetings and seminars. He has worked with researchers from different disciplines, international organisations, and governments. He has deep understanding of various developing countries.
